JOHN INNES NO. 1 COMPOST

A traditionally formulated loam based compost. It contains all the essential nutrients and trace elements for the successful growth of seedlings, bedding plants and sensitive spires.

HOW TO USE:

Use Clover John Innes No. 1 Compost straight from the bag. Ensure all containers, trays or pots are clean and sterile prior to use. Fill tray, pot or container with Clover John Innes No.1 Compost to just below the rim and tap gently until surface is level. Prick out or pot on young seedlings or mature plants, taking care not to damage fragile roots and stems. Water carefully with a fine rose or sprayer. Do not over water. The compost should be moist but not saturated. Begin supplementary feeding after 3-4 weeks using one of the Specialist Fertilisers from the Clover range. If further potting on is required, select one of the composts from the Clover range to suit your plants specific requirements.

Store in dry conditions away from direct sunlight.

SUBSTRATE AREA
THIS DOES NOT NECESSARILY INDICATE PRINT SEQUENCES

This print is NOT a colour proof and may vary in colour from the print achieved on the finished product. A colour proof is a separate print based on a colour calibration. Colours used on appearance and NOT FUNCTIONAL. Where PANTONE colours are indicated, they are intended for reference purposes only. An actual PANTONE reference is not provided as the true colour of the print should be sought to ensure the printer's responsibility to reproduce colours to the quality printing.
